

# Ivan Mikheev

**AI engineer & entrepreneur.** I engineer adoption — interfaces between intelligent systems and the people who use them: protocols, products, and teams.

|                                                               |                                                                                                                                                                                                                                                                                                |
|---------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>geofence twin</b><br>nebius serverless ai challenge · 2026 | Semantic digital twin over GPS telemetry: hybrid anomaly scoring plus a SPARQL-queryable SAREF/RDF knowledge graph; batch enrichment and FastAPI inference, containerized on Nebius. Public write-up on LinkedIn.<br>roc-auc 0.8247 · 24 380 triples · 1.9 s batch · shipped ahead of deadline |
| <b>deckgen</b><br>live product · deckforge-web.vercel.app     | Citation-backed deck generation: every figure resolves to an evidence ledger; orchestrator fans out cite-only agents, a verifier gates the deck. Next.js · Trigger.dev · Supabase/pgvector.<br>194 unit tests · 100% figures cited · 0 dangling citations                                      |
| <b>tracker</b><br>live app                                    | Multi-project kanban with an AI copilot — column summaries and suggested next moves. The operations twin of how I run projects.                                                                                                                                                                |
| <b>voltstream</b><br>msc systems track · 2026                 | Multi-service EV-charging platform: per-service databases, sync + async messaging, graceful degradation under partial failure. Contract-first, three-phase agentic build.                                                                                                                      |
| <b>matter home</b><br>running network                         | RPi5 border router with Nordic RCP radio; ESP32-C6/S3 nodes bridged into the Matter-over-Thread standard so custom hardware commissions and behaves like factory devices.                                                                                                                      |

Ventures & roles

the honest ledger — with the lesson each one paid for

|                                                |                                                                                                                                                                                                                                                  |
|------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2025 → now<br>nullspace.cloud · easyletters.ai | <b>Strategic consultant</b> — agentic-first product transformation, sales architecture, product-market-fit for two NL startups. <span>advising</span>                                                                                            |
| 2024 → 2025<br>find-vendor                     | <b>Founder</b> — agentic sourcing for industrial procurement; field research with truck, food, and solar manufacturers. Lesson: agents fail on trust, not capability — sell the audit trail first. <span>sunset</span>                           |
| feb → may 2024<br>sauroneye → earthian         | <b>Commercial lead</b> — AI green-investment assessment; B2B with Swiss investment and portfolio firms and Dutch insurers. Lesson: enterprise AI sells on auditability before accuracy. <span>exited</span>                                      |
| jun 2023 → jan 2024<br>julius meinl living     | <b>Innovation manager</b> — guest-experience research, analytics pipelines, and The Julius Ecosystem: wallet-pass perks geo-anchored across a partner network. Lesson: in hospitality the product is the feeling of access. <span>piloted</span> |
| 2022 → 2024<br>glideview                       | <b>Founder</b> — AR product presentation and a 3D-to-web optimization pipeline; early reality-capture and gaussian-splatting work; pilots with an industrial client. Lesson: technology readiness ≠ market readiness. <span>sunset</span>        |

## Education

|                       |                                                                                                                                                                |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2025 →<br>in progress | <b>MSc Business &amp; IT</b> , enterprise track — University of Twente. AI in business cases: TrenData agentic marketplace + MCP; decentralized digital twin.  |
| → 2025                | <b>BSc Creative Technology</b> — University of Twente. Published thesis: mapping process-mining artefacts to stakeholder information needs (essay.utwente.nl). |
| minor                 | <b>Cloud Computing</b> — Illinois Institute of Technology. AWS provisioned through Terraform; infrastructure as code.                                          |

## Pressure tests

|      |                                                                                                                                                            |
|------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2026 | Nebius Serverless AI Challenge — the geofence twin, solo, shipped early.                                                                                   |
| 2023 | Insurance Challenges @ Achmea & Allianz — age-aware cyber-risk education; on-prem LLM with retrieval for medical claim review. Covered by verzekeraars.nl. |

## Human layer

Process Communication Model for team rapport; led team formation across all listed projects. EN (academic) · RU (native) · NL (A1). Photography, cross-country riding, Matter/Thread home lab.

## Stack

langchain · langgraphrag

knowledge graphs · rdf · sparqlpython · fastapi

react · next · typescriptsupabase · pgvector

terraform · awsdockerclaude code cli

mqtt · matter/thread

## Method

Spec-driven agentic development — my formalized framework: strategist / implementer / operator roles, TDD in layers, adversarial read-only verification, and a live run as the definition of done. Applied on deckgen and the Nebius twin; published at imikheev.dev/methods.
